About BAHASA HOLDINGS

Bahasa Holdings is a company of Employees who worked at Eskom on Configuration Management with over 10 years experience in the work of Configuration Management and in giving advise, review and verify codification from all Project taking place in the Plant System. We are based in Mpumalanga and ben operating in the surroundings of Mpumalanga and Eskom Power Stations doing Configuration Management.

What is Configuration Management

Configuration Management is to establish and maintain consistency of the operating assets attributes (Its performance, functional and physical attributes) with design and operating information throughout its operating life span.

Configuration Management consists of following services:

1. Plant audit and verification
2. Configuration items identification
3. Plant coding, coding reviews and plant labelling
4. Technical documents and records management (creation and update of databases)
5. Manage and evaluate engineering changes
6. Provide CM status accounting
7. Data preparation and clean-up
8. Data migration to Configuration Tools used on site

We use KKS as a base of our Plant Breakdown Structure for Coding and Identification in all types of drawings and labels on all components

Our mission & vision statement

Vision

Our vision is to be a global, innovative and competitive enterprise with but not subjected to any change..
To provide manageable solutions to clients.

Mission

To be a leading enterprise, providing superior quality products and services at competitive prices.

What we do...

- Manage and administer all KKS related communication in the Project.
- Develop and maintain the Master KKS database and ensure that there are no duplicate KKS codes from the various KKS codes provided in the project.
- Perform Project plant walkdowns and verify that KKS labelling is correct, and installed as per the required standards, the plant KKS coding corresponds with that of the drawings and other documents.
- Determine which documents need KKS codes and ensure that these documents are coded accordingly. Typical documents are drawings, P&ID's, single line diagrams and manuals.
- Manage and control, the Plant Breakdown Structure (PBS) for all Project Contractors, for breakdown levels.
- Maintain integrity between equipment list / load schedules & all other child documentation.
- Report back to the Employer the status of KKS Codification every once a month.
- Maintain an up-to-date equipment list.
- Supply and install plant labels according to labelling standards. (Plant label list/scope will be provided and to be quoted by the Consultant as and when required).
- Report on undelivered and documentation that reflects late by comparing the VDSS with the MDL.
- Compile and maintain the plant system MRI set by means of the correct linking (creating a relationship between the document record and PBS).
- Compare PBS with latest package equipment lists, load list, valve schedules, signal list

Our competitive advantages

Experts in project execution

Successful implementation of Configuration Management services and its demands highly effective project management and planning from commencement up to hand-over to the client. Bahasa intends on providing highly focused project execution.

CM expertise

Our experienced in-house resources will enable Bahasa to respond flexibly and responsively to project specific requirements. We are highly experienced in Configuration Management, Plant label installations, designs and maintenance.

Complex projects

Bahasa intends on being an all professional market leader in large scale projects. Our group will have a unmatched capability to effectively handle innovative and technically challenging projects.
